Goldings House,
2 Hays Lane
London SE1 2HW (GB)

(54) **Command versus dictation mode errors correction in speech recognition**

(57) Correction of speech recognition mode errors in a document for a program. A speech recognition program module receives speech input (304) from a user to initiate a command or to input as dictation into a document. The speech recognition program module sends the speech input to a speech engine to be processed as both a command and as dictation. A command processor processes the speech input into a command result (308), and a dictation processor processes the speech input into a dictation result (306). A mode selection processor determines a speech recognition mode for the speech input (310), and sends the selected mode results to the application program (312). The alternative mode results are stored in RAM for later retrieval (314). A mode correction processor detects when a speech recognition mode error has occurred (316), and enters into a routine to correct a mode error. If a command mode error has been made, then the mode correction processor permits the user to select a candidate dictation (320) or alternative mode results for entry into the document. Alternatively, if a dictation error has been made, then the mode correction processor permits the user to select a candidate command (322) or alternative mode results for entry into the document.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 00 30 9029

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
